ABSTRACT

Customer Relationship Management (CRM) is a system used to manage customer interactions, sales, and business processes. A CRM application helps businesses store customer information, manage orders, track sales activities, and improve customer satisfaction.

This project focuses on developing a CRM Application for The Chai Shop & Co using the Salesforce CRM platform. The system is designed to manage customer details, product information, orders, and sales activities efficiently.

The application helps the company maintain customer records, track chai product sales, monitor customer feedback, and analyse business performance. The system centralizes customer data and automates business processes such as order tracking, product management, and reporting.

By implementing this CRM solution, The Chai Shop & Co can improve operational efficiency, enhance customer experience, and make better business decisions using real-time data and analytics. CRM systems help organizations organize customer information, automate tasks, and analyses customer behaviour to improve business growth.

INTRODUCTION

Customer Relationship Management (CRM) is a technology used by organizations to manage relationships with customers and potential clients. It helps businesses store customer information, track interactions, manage sales processes, and improve communication.

In today's competitive market, companies must maintain strong relationships with their customers to increase loyalty and revenue. CRM systems provide tools to manage customer data, automate workflows, and generate reports that help businesses understand customer behaviour.

This project develops a CRM application for The Chai Shop & Co, a chai retail business. The system allows the organization to manage customer records, track orders, and monitor product sales efficiently.

The main objectives of the system are:

- Maintain customer information
- Manage product details
- Track orders and sales
- Improve customer service
- Generate reports for decision making

PROBLEM STATEMENT

Traditional chai shops usually manage customer information, product sales, and order details manually using notebooks or spreadsheets. This approach creates several problems:

1. Difficulty in maintaining customer records
2. Lack of centralized data storage
3. Errors in order tracking
4. Inefficient inventory management
5. Poor customer engagement
6. Lack of data analysis for business growth

The Chai Shop & Co needs an efficient digital system to manage customer relationships and sales activities. Therefore, a CRM application is required to streamline operations and improve overall business performance**.**

SYSTEM OVERVIEW

The CRM system for The Chai Shop & Co provides a centralized platform to manage customers, products, and orders.

Main Modules of the System:

1. Customer Management

- Store customer details
- Track customer purchase history
- Maintain customer feedback

2. Product Management

- Manage chai product details
- Maintain product categories
- Track product availability

3. Order Management

- Record customer orders
- Track order status
- Generate invoices

4. Sales Management

- Track sales transactions
- Monitor daily revenue
- Analyse product performance

5. Reporting Module

- Sales reports
- Customer reports

- Product performance reports

This system improves data management and helps employees easily access information about customers and orders.

SYSTEM MODULES IN DETAIL

1. **User Interface Layer**
    - Forms
    - Dashboards
    - Reports
2. **Application Layer**
    - Salesforce logic
    - Business rules
    - Automation workflows
3. **Database Layer**
    - Customer records
    - Product information
    - Order data
4. **Security Layer**
    - User authentication
    - Role-based access control
5. **Actors in the System**

- Admin
- Sales Manager
- Staff
- Customer

DATA STRUCTURE AND RELATIONSHIPS

The system contains several objects (tables).

Main Objects

1. Customer
2. Product
3. Order
4. Order Item
5. Sales Report

Relationship Between Objects

Customer → Order → Order Items → Product

Relationship types:

- One Customer → Many Orders
- One Order → Many Order Items
- One Product → Many Order Items

USER INTERFACE DESIGN

The user interface of the CRM application is designed to be simple and user-friendly.

Key UI Components

1. Dashboard
2. Customer Form
3. Product Management Page
4. Order Entry Form
5. Reports Page

UI Features

- Easy navigation
- Search functionality
- Data entry forms
- Graphical dashboards
- Mobile accessibility

VALIDATION AND DATA ACCURACY

To maintain accurate data in the CRM system, validation rules are implemented.

Validation Rules

- Customer phone number must contain 10 digits
- Email must follow proper format
- Order quantity must be greater than zero

- Product price cannot be negative

Data Accuracy Methods

- Required fields
- Input validation
- Duplicate record prevention
- Automated workflows

TESTING PROCESS

Testing is an important phase in software development to ensure that the system works correctly and meets user requirements. The CRM application for The Chai Shop & Co was tested using different testing methods to verify system functionality, data accuracy, and performance.

Unit Testing

Unit testing is performed to test individual components of the system. Each module such as Customer Management, Product Management, and Order Management was tested separately to ensure that they function correctly.

Examples:

- Testing customer data entry form
- Testing product creation module
- Testing order generation process

Integration Testing

Integration testing checks whether different modules work together properly. The interaction between customer records, orders, and products was tested.

Examples:

- Customer placing an order linked to a product
- Order automatically calculating the total amount

System Testing

System testing ensures the entire CRM application works as expected. It verifies that all features operate correctly when integrated.

Examples:

- Complete order workflow from customer creation to sales report
- Generating reports for business analysis

User Acceptance Testing (UAT)

User acceptance testing ensures that the system meets the requirements of the end users.

Employees tested the system to check.

- Ease of use
- Data entry accuracy
- Report generation

ADVANTAGES OF THE SYSTEM

The CRM system developed for The Chai Shop & Co provides several advantages for managing customer relationships and business operations.

- **Centralized Data Management**
  All customer, product, and order data are stored in one centralized system.
- **Improved Customer Relationship**
  The system helps maintain customer records and track purchase history.

- **Better Sales Tracking**
  Sales activities and transactions can be monitored easily.

- **Efficient Order Management**
  Orders can be recorded and tracked quickly.

- **Data Analysis and Reporting**
  Managers can generate reports to analyse business performance.

- **Cloud Accessibility**
  The system can be accessed from anywhere using the Salesforce platform.

- **Reduced Manual Work**
  Automation reduces paperwork and manual errors.

SUMMARY OF THE PROJECT

The CRM Application for The Chai Shop &Co provides a centralized system for managing customer relationships, product inventory, and sales transactions. The system helps the organization store customer data, track orders, and generate reports efficiently.

By implementing the CRM solution using Salesforce, the company can automate business processes, improve customer service, and enhance operational efficiency. Cloud-based CRM systems allow businesses to manage customer interactions, automate tasks, and gain valuable insights from business data.

Overall, the project demonstrates how CRM technology can help small businesses improve customer engagement, increase productivity, and achieve sustainable growth.
